

## **Safeguarding and Welfare Requirement: Health**

Providers must have and implement a policy, and procedures, for administering medicines. It must include systems for obtaining information about a child's needs for medicines, and for keeping this information up-to-date.

### **6.1 Administering medicines**

#### **Policy statement**

While it is not our policy to care for sick children, who should be at home until they are well enough to return to the setting, we will agree to administer medication as part of maintaining their health and well-being. We ensure that where medicines are necessary to maintain health of the child, they are given correctly and in accordance with legal requirements.

In many cases, it is possible for children's GPs to prescribe medicine that can be taken at home in the morning and evening. As far as possible, administering medicines will only be done where it would be detrimental to the child's health if not given in the setting. If a child has not had a medication before, especially a baby/child under two, it is advised that the parent keeps the child at home for the first 48 hours to ensure there are no adverse effects, as well as to give time for the medication to take effect.

Our staff are responsible for the correct administration of medication to children for whom they are the key person. This includes ensuring that parent consent forms have been completed, that medicines are stored correctly and that records are kept according to procedures. In the absence of the key person, the supervisor is responsible for the overseeing of administering medication. We notify our insurance provider of all required conditions, as laid out in our insurance policy. While permissions are being sought, a parent will be required to attend to administer medication

#### **Procedures**

- Children taking prescribed medication must be well enough to attend the setting.
- We only usually administer medication when it has been prescribed for a child by a doctor (or other medically qualified person). It must be in-date and prescribed for the current condition.
- We do not administer non-prescription medication, such as pain or fever relief (e.g. Calpol) Children under the age of 16 years are never given medicines containing aspirin unless prescribed specifically for that child by a doctor.
- Children's prescribed medicines are stored in their original packaging in a clear container with the child's name and an up to date photo of the child attached. Copies of the doctor's instructions, parent's permission and medication form are to be kept in the container with the medication. Any medication will be stored in the

kitchen and are inaccessible to the children. On receiving the medication, the member of staff checks that it is in date and prescribed specifically for the current condition.

- Parents must give prior written permission for the administration of medication. The staff member receiving the medication will ask the parent to sign a consent form stating the following information. No medication may be given without these details being provided:
  - the full name of child and date of birth
  - the name of medication and strength
  - who prescribed it
  - the dosage and times to be given in the setting
  - the method of administration
  - how the medication should be stored and its expiry date
  - any possible side effects that may be expected
  - the signature of the parent, their printed name and the date
- The administration of medicine is recorded accurately in our medication record book each time it is given and is signed by the person administering the medication and a witness. Parents are shown the record at the end of the day and asked to sign the record book to acknowledge the administration of the medicine. The medication record book records the:
  - name of the child
  - name and strength of the medication
  - name of the doctor that prescribed it
  - date and time of the dose
  - dose given and method
  - signature of the person administering the medication and a witness who verifies that the medication has been given correctly
  - parent's signature (at the end of the day).
- If the administration of prescribed medication requires medical knowledge, we obtain individual training for the relevant members of staff by a health professional.
- If rectal diazepam is given, another member of staff must be present and co-signs the record book.
- No child may self-administer. Where children are capable of understanding when they need medication, for example with asthma, they should be encouraged to tell their key person what they need. However, this does not replace staff vigilance in knowing and responding when a child requires medication.
- We monitor the medication record book is monitored to look at the frequency of medication given in the setting. For example, a high incidence of antibiotics being prescribed for a number of children at similar times may indicate a need for better infection control.

#### *Storage of medicines*

- All medication is stored safely in the kitchen or refrigerated as required and are kept in a marked plastic box.
